## **Celerity Showcases Fiber Optic HDMI and DisplayPort Cable New Cables offer 18G Stability and Lossless Video**

**Irvine, CA – May 1, 2018** – Celerity Technologies, the leader in 4K 18G fiber optic cable solutions, will exhibit at the **2018 Infocomm show, booth #C3112**. Celerity will be showing its new Universal Fiber Optic HDMI and DisplayPort cables. Available immediately, Celerity UFO cables represent the latest in fiber optic advancement for high-performance, lossless video.

Celerity UFO cables are plenum rated with 100% glass conductors to transmit HDMI or DisplayPort from 35 feet to 1000 feet.

Celerity UFO cables are easily deployed thanks to Celerity's "2 Steps to Fiber Optic" innovation. No terminations and no tools are required so reliability and labor savings are achieved. The transmitting receiving connector cables feature a 6ft fiber pigtail which optically connects to the Celerity UFO fiber cable. Spring-locks on each fiber connector and a snap-on coupler ensure precise alignment. Power is supplied by the source for the transmitting end and via a USB 5V power cable to the display at the receiving end.

Connecting AV systems with Celerity UFO for conferencing, high-impact presentations, digital signage and video walls provides a reliable interface, and immunity from interference. A Keystone wall plate for Celerity UFO is also available for architectural finishing and in-room fiber connections for computers and conferencing devices. Celerity UFO will be upgradable in the future and the company's plans include multiple signal transmission over fiber using the UFO design platform.

###

### **About Celerity Technologies-**

Founded in 2012, Celerity Technologies, the inventor of the first fiber optic HDMI cable to deliver 18Gbps, 4K 60Hz 4:4:4 color is dedicated to providing lossless connections between source and display components. Celerity possesses precision engineering experience for signal processing over fiber optic for HDMI, DisplayPort, DVI, Ethernet, RS232, IR and USB.
